

USB pendrive

Instructions for the proxy configuration with USB pendrive - Windows.

To configure the proxy service with a USB pendrive you need to perform the following steps:

1. After clicking on the Windows icon at the bottom left, select the item "Pannello di controllo (Windows Control Panel)" as shown in figure 1.

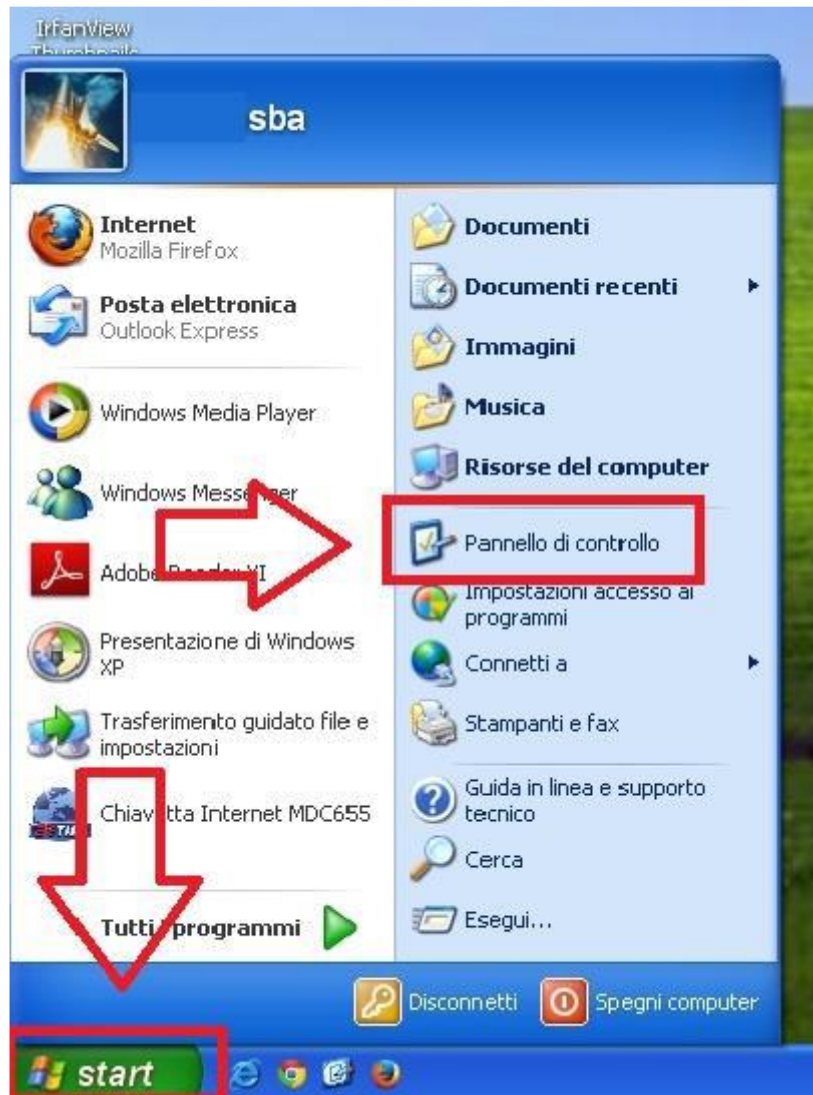

Figure 1 - Control panel

2. Then select "Internet Options", as shown in figure 2.

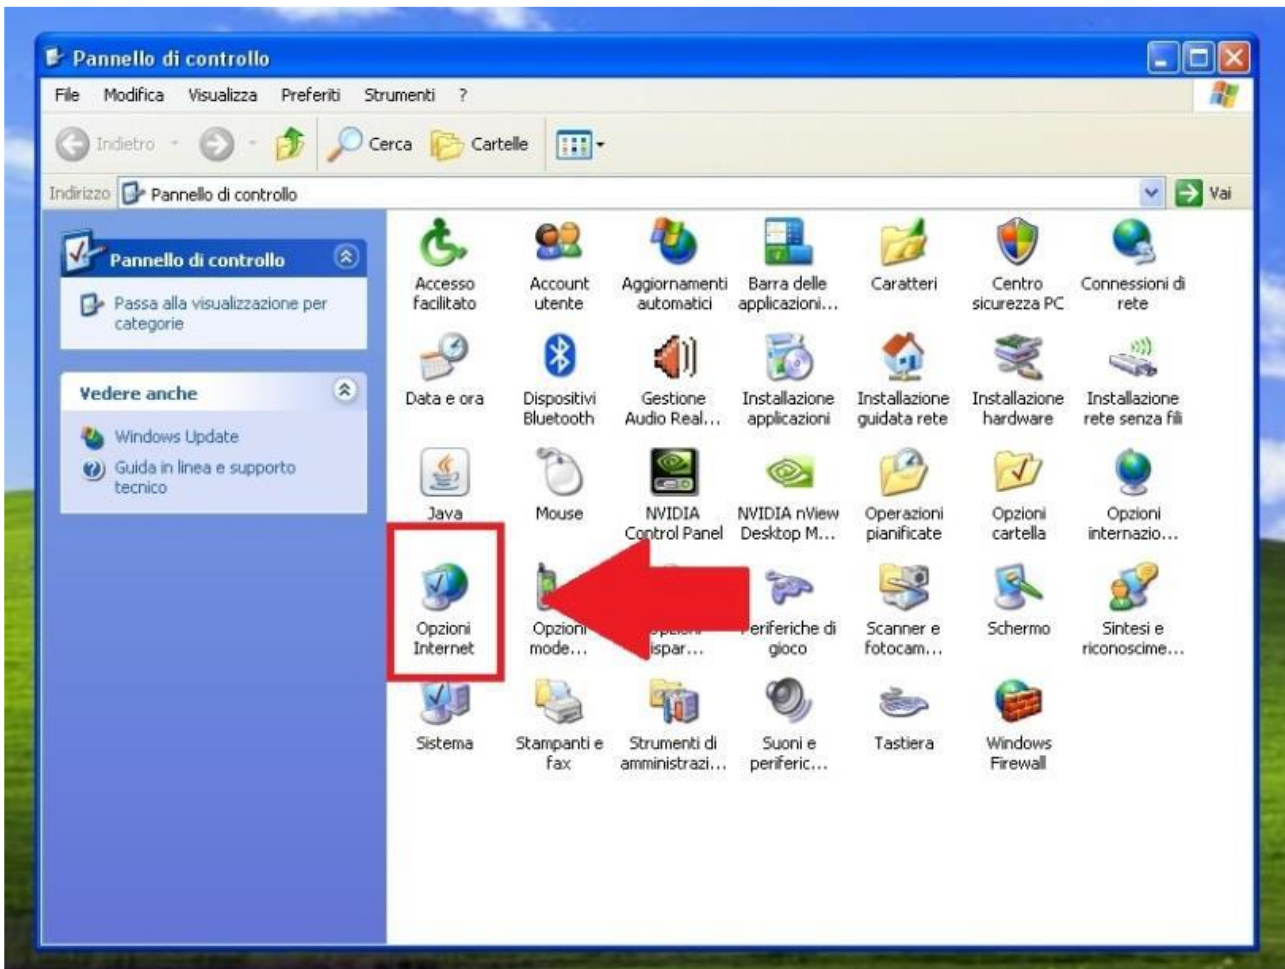

Figure 2 - Internet options.

3. After selecting the "Connessioni (Connections)" tab, select the entry for the with 1 click key connection (Impostazioni connessioni remote e VPN - Remote and VPN connection settings panel), then click on "Impostazioni (Settings)", as shown in figure 3

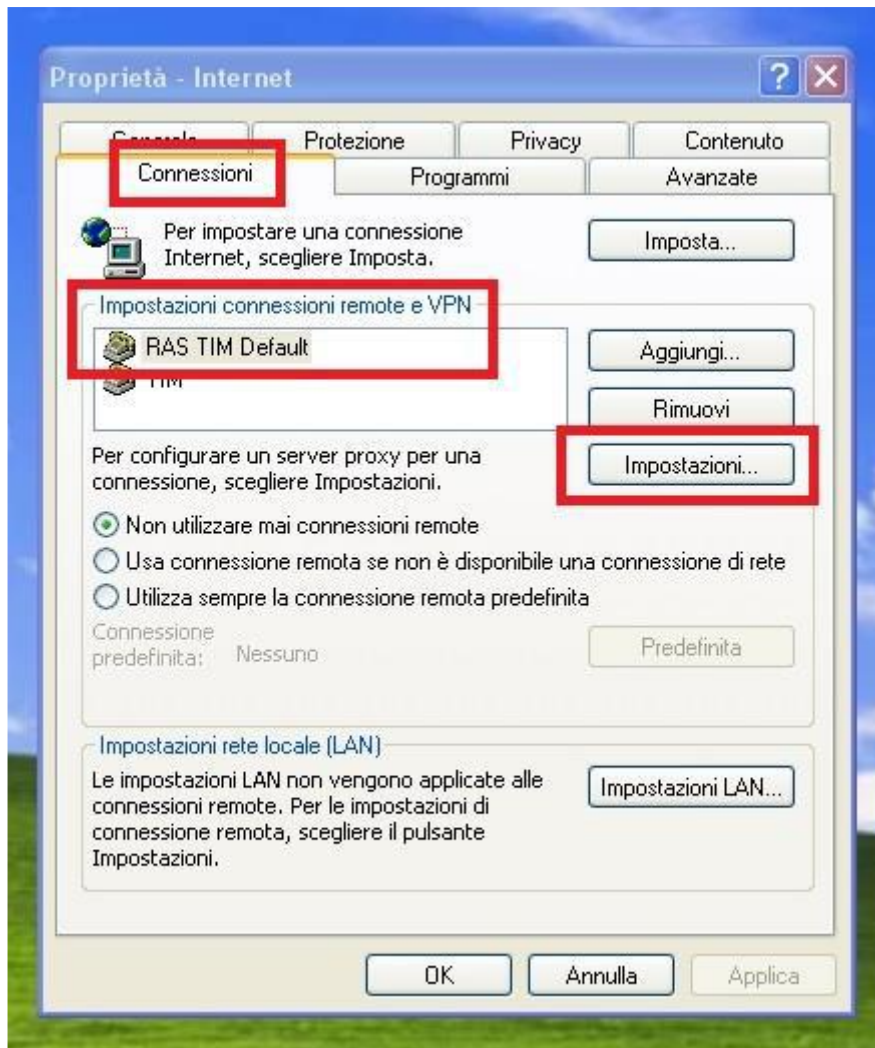

Figure 3 - Connections tab.

4. In the "Impostazioni (Settings)" window, section "Server Proxy", check the box "Utilizza un server proxy per questa connessione (Use a proxy server for this connection)", then insert the text **proxy.unito.it** in the "Indirizzo" address box and in the box "Porta" the value **3128** as shown in figure 4. After configuration, click on the button "OK".

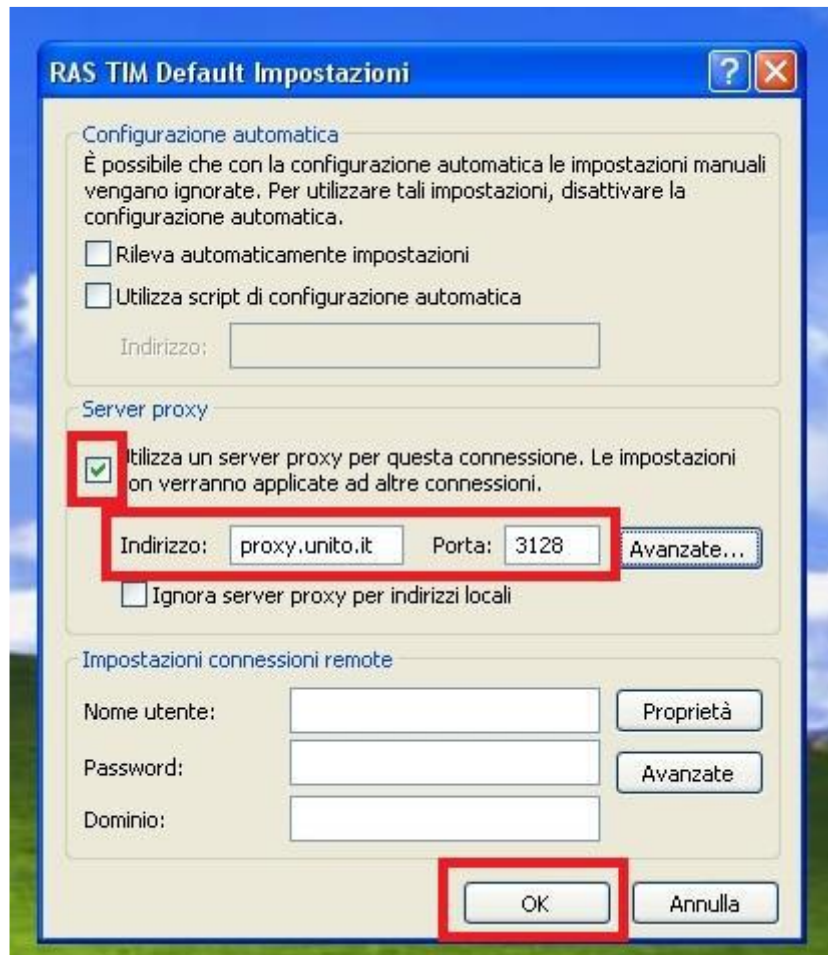

Figure 4 - Network settings.

If in point 3, in "Dial-up and VPN settings", are shown 2 items, repeat the configuration operations 3 and 4 also for the second voice.

Now you can start browsing. Enter of UniTO credentials when requested.

Remember that with this procedure you have configured the key's network settings. So if the next time you use the PC, you will connect to the network by another means (UniTO wi-fi, home modem, etc.), you will have to repeat the configuration by changing the network settings on your browser (Explorer, Firefox, Chrome).

The same section also publishes instructions for the other main browsers in use.
